

Knürr Cable Management

Knürr Cable Management Strong points

MEC20064

It must be ensured when laying cables that every kind of mechanical stress is avoided.

MEC20086

MEC20074

MEC20058

MEC20084

LIG00021

Bending load

The bending radii may never be less than the values provided by the cable manufacturer in the respective data sheets. At points that bend too much, the electrical properties of the cable change and reduce the transmission bandwidths and ranges.

If manufacturer specifications are not available, then the following rule of thumb applies: With loose cabling, at least 15 times the external cable diameter and with fixed cabling, at least 10 times the external cable diameter.

Buckling load

The most extreme bending loads can cause the cable to break.

Tensile load

This is only determined by the copper cross-section of the conductor, as all other materials are too soft. The cable may not be stressed more than 50N/mm²(Cu cross-section) as otherwise the conductors are stretched and the cross-section is reduced. If higher "pulling" forces are required, then cables with additional strain relief elements must be used.

Compressive stress

Compressive stress is caused by loads bearing down from above, fixed clamping or sharp cable kinking and must always be avoided, as otherwise the "loose" cable structure changes and the electrical transmission properties are impaired.

Torque strains (twisting)

These must never have an effect on the cable, as they drive the cable elements into one another and therefore impair the transmission properties.

Knürr Cable Management Strong points

1 MEC20082

1 Different components for fiber-glass and copper cables, especially the fastening options using Velcro strips and cable bundling using different colored strips, guarantee transparent cable management, which is the optimum starting situation for an intelligent expansion of the network and for the highest standard of service convenience.

2 With all cable management components, special attention has been paid to ensuring that fixing is possible with Velcro strip cable ties. Velcro cable ties not only guarantee a stress-free fixing of the cables, they can also be released at any time and re-used again and again. Velcro cable ties are also extremely helpful for the installation engineer in providing pinch-free cable bundling – and also because they are so quick to apply.

3 Excess cable lengths are stored separate from the patch fields, but in a position that is always easy to access. Copper cable excess can be stored separate from fiber glass excess within the Knürr rack systems: the copper cables on the side and the more sensitive fiberglass cables in an excess drawer at the front.

2 MEC20070

3 MEC20099

4 Some true multi-talents appear on closer examination of the individual products. The cable routing multi-functional brace, for example, not only provides the option of routing cables horizontally and vertically using Velcro ties or cable ties, but rather also allows numerous components to be mounted with screws and caged nuts. These caged nuts can also be shifted with room for play in a slot, so that every mounting dimension can be accommodated.

5 The prescribed radii are preset with the radial limiter. These components ensure that neither a reduction of the transmission bandwidths and ranges nor a cable break occur.

Handle

- Suitable for shelves and heavy-duty shelves
- With internal thread, M5

Material

Die-cast aluminum consoles
Handle extrusions of extruded aluminum
Cap made of ABS UL 94 HB

Finish:

Handle, powder-coated, gray-blue,
RAL 5008/Cap, light gray,
RAL7035

Supply schedule

2 handles

HEI00379

1 Distribution Box

- For mounting installation technology DIN rail components, such as fuses, clamps, relays, etc.
- In the built-in status, the mounting level can be pulled out at the front, locked in position, and as a result, significantly simplifies the wiring of the individual components
- Not with "fixed installation" model
- On request: Delivered assembled and wired
- Further versions and models on request
- Installation space for up to 22 pieces of equipment with 18 mm width each
- Mounting of the TS35 DIN rail on several levels with simple plug-in connection
- Not with "fixed installation" version
- "Snap-in" mounting of DIN rail components
- Easy access to the protective earth and neutral conductor rails from the front
- Various positioning options prepared for N and PE rails
- Not with "fixed installation" version
- Cable entry at the rear via double brush strip (optionally via bushing sockets)
- Cable strain relief on the inside and therefore accessible from the front
- Labeling strips on the front, above and below the installation space
- Installation options for power distribution with 230 V AC, but also in the low voltage range (e.g. 48 V DC)
- 19" slot-in, 3 U, depth 150 mm

Material/ Finish

- Covers, powder-coated texture, RAL 7035 light gray
- Main unit, zinc-passivated sheet steel

Supply schedule

- 1 distribution box
- Including N and PE rails, cable entry, cable strain relief, empty panel covers and earth set

How supplied

- Fully assembled

Adaptive Rack PDU

Liebert MPX™

The **Liebert MPX™** modular rack PDU system is particularly impressive with its maximum flexibility, highest possible availability and low operating costs. With the **Liebert MPX™** users can quickly and specifically react to new requirements for power supply and rack management. The **Liebert MPX™** gives users the ability to dimension their rack PDU system so that all current requirements are met first off. The system can then be flexibly adjusted later on when new requirements appear. The **Liebert MPX™** builds on a design that is based on a power supply/communication bus and on input/output modules.

The **Liebert MPX™** modular rack PDU consists of various modules. The foundation stone is a busbar, which is responsible for the power and communication distribution to the individual modules. The input power is routed via the MPX Power Entry Module (MPX PEM) to the MPX system. Different output modules (MPX Branch Receptacle Modules, MPX BRM) are available according to requirements. Four different lines can be set up depending on the equipment:

- **Liebert MPX™** Elementary
- **Liebert MPX™** Elementary Phase monitored
- **Liebert MPX™** Branch monitored
- **Liebert MPX™** Receptacle managed

These lines can also be mixed on a shared busbar, this being one of the exceptional features of the **Liebert MPX™**. Interfaces for the network communication, the sensors and/or the local display are provided by the Liebert Rack PDU Card (Liebert RPC) in the MPX PEM. The Liebert RPC Card enables connection to an optional RPC Basic Display Module (RPC BDM) to display the local status and alarms.

The **Liebert MPX™** is provided as a separate, loosely packaged module for on-site configuration by the user. The MPX was designed especially for quick and easy configuration and re-configuration. Preconfigured systems are also available when ordered as factory-installed Knürr rack enclosure systems.

Liebert MPX™ Strong points

■ Highest possible security and availability with:

- Redundant control electronics power supply (with redundant tapping of various phase in the Power Entry Module)
- Fixed databus on the busbar (making cable breaks a thing of the past)
- With complete data tapping on the PEM (without any additional external monitoring devices)
- Additional neutral conductor measurement
- Crest factor measurement (mains quality evaluation, allowing power supply failures to be identified early on)

■ Maximum flexibility and scalability with:

- Configuration of all modules according to their requirements (including input module)
- “Hot-swappable” during running operation
- Feed can be changed (single-phase up to three-phase, 16 up to 63 ampere)
- Mobile display for reading all MPX™ data on the rack
- Optical display of the slot space (easy server slot space identification at the push of a button)

■ Ultimate high performance with:

- Power illustration up to 28 kVA per bar and 55°C ambient temperature
- Only one IP address for up to 4 bars with 24 modules
- Plug and play for numerous sensors

- Extensive monitoring with a measuring accuracy of +/- 1% up to output level
- Module and sensor autodetect function with operating software
- Lowest possible MPX™ system power loss

■ Perfect for blade servers and changing environments

Data centers work more and more with high performance blade servers and require more processor power on low rack space; cabling must be simplified; power consumption must be reduced. With the MPX™ the data center can quickly react to changes, which is why our product is the right choice for your infrastructure's administration.

Status display (RPC-BDM)

Can be easily positioned at the optimum spot for the individual rack; even functions outside the rack. This connected display can be mounted just as the user wishes.

DOS20153

Liebert MPX™ PRC - Power Distribution Unit/Communication Bus

- The MPX PRC is the foundation stone of the Liebert MPX PDU.
- Power and data transfer buses are integrated fixed over the entire length of the MPX PRC.
- The MPX BRMs (output modules) and the MPX PEM (power entry module) are fixed on the MPX PRC and depending on the type take care of the modules' power feed, output, monitoring and management.

Material/ Finish
 Busbars housing: Aluminum
 Busbars: Copper
 Databus: Gilded

Dimensions
 Width: 68 mm
 Height: 24 mm

Color
 Housing: aluminum

Liebert MPX™ – Input Module/Power Supply

- Elementary and Monitored type:**
- The MPX PEM is fixed on the MPX PRC and provides the connection to the power supply.
 - Cable is connected fixed, 3 m long
 - With IEC60309 plug, 1Ph/N/PE 6h blue, 3Ph/N/PE 6h red

- Monitored type:**
- The MPX PEM provides the connection to the databus for the data communication.
 - The MPX PEM has an installation slot into which the RPC-1000 communication card can be installed. (Not in the supply schedule)
 - Provides the following measured values of the phase inputs: real power, current, voltage, frequency and consumption.
 - Power alarm functions for the individual phases and their operating status are also supported.
 - Further important features: Three displays inform the user about the current status of each individual input. An acoustic alarm is activated with specific overload conditions.

Material/ Finish
 Housing: Aluminum
 Cover: Sheet steel
 Power contacts: Silvered
 Databus contacts: Gilded (only Monitored type)

Dimensions
 Width: 75 mm
 Height: 65 mm
 Cable: 3 m

Liebert MPX™ BRM - Output Module

- The MPX BRM takes care of the power distribution to the individual load
- Each module taps a phase; this is color-identified on the module.
- All modules are protected against overload with a 20A circuit breaker.
- Changing the modules during operation enables a user-defined installation, without having to shut down the Liebert MPX.
- Up to 3 BRM output modules can be installed on a 1035 mm PRC busbar; up to 6 BRM output modules can be installed on a 1880 mm PRC busbar.

Type E - Elementary:

- Module for power distribution via respective outputs

Type B – Branch monitored:

- Module for power distribution via respective outputs with measuring function on module level
- The MPX BRMs have an LED-ID indicator, which clearly identifies every module with a number.
- The modules are administered in the software
- Provides the following measured values: power, current, voltage, apparent power, kWh and power factor
- Power alarm functions and the operating status are supported

Type R – Receptacle managed:

- Module for power distribution via respective outputs with measuring function on module level and output level

- The MPX BRMs have an LED-ID indicator, which clearly identifies every module with a number.
- The modules are administered in the software
- Provides the following measured values: power, current, voltage, apparent power, kWh, frequency, power factor and crest factor
- Power alarm functions and the operating status are supported
- The individual outputs can be switched on and off remotely

Material/ Finish

DOS20153

Liebert RPC - 1000 Communication Card

- The Liebert RPC centralizes the Liebert MPX local and remote administration.
- Administration via web and SNMP for systems connected to the Ethernet.
- Also serves as the connection point for versatile support options and devices, such as the display module (RPC BDM), various sensors and connection to other Liebert MPX or Liebert MPH systems, for example.
- Has RJ-45 ports for all connections and does not require any special cabling.
- Supports 10 and 100 MBit Ethernet and provides on-site firmware upgrade.
- Installed in an MPX PEM (input module) slot.

Technical data Interfaces:

- RJ-45 LAN port (10/100 MBit) – for connecting to the local network (LAN) via an Ethernet cable

- Expansion/administration port for local configuration using a computer/laptop, for setting up a link-up of several PDUs (Liebert MPX or MPH)
- Display port for connecting the RPC BDM (display module)
- External sensor port for connecting optional sensors

Supported technologies:

- Web support, provides Liebert MPX control and management. Authorized users can view status information via their network.
- SNMP support, provides Liebert MPX SNMP management.
- Easy integration into Liebert Nform, Avocent DSVIEW3 and Nagios

Supply schedule

- 1 RPC-1000 communication card

Liebert RPC BDM - 1000 Display Module

- Provides the local display of the monitored data for all connected Liebert MPX and Liebert MPH systems.
- Operated with the aid of a navigation switch.
- Connected via a cable with the Liebert RPC, which provides the user the option of placing the displays where they can be easily read in accordance with the local space conditions.
- An individual display can be used for up to four Liebert MPX or Liebert MPH PDUs, which are connected to a PDU array.

Note

The Display Module is not required for operating the Liebert MPX or MPH, but it itself requires the Liebert RPC-1000 (communication card)

Supply schedule

- 1 RPCBDM-1000 Display Module
- 1 2m power supply lead
- 1 mounting set

Liebert MPX™/MPH™ Sensors

- The sensors are designed for tool-less installation in a Knürr Miracel Rack, but they can also be installed in any other rack.
- "Fixed" type sensors are fixed to a cable.
- "Modular" type sensors can be connected with the delivered cable.
- Are affixed to the RPC-1000 communication card
- Several sensors can be connected in rows (max. length: 20m)
- Are automatically displayed in the Liebert MPX/MPH software
- Temperature measuring range: 5-55°C

- Accuracy: +/- 0.5°C
- Humidity measuring range: 10 – 95%
- Accuracy: +/- 3.5%

Note

The sensors are not required for operating the Liebert MPX or MPH, but they require the Liebert RPC-1000 (communication card)

Supply schedule

Managed Rack-PDU

Liebert MPH™

The **Liebert MPH®** Managed Rack PDU is a power supply system with monitoring and control functions.

The **Liebert MPH®** monitors the current, voltage, kW and kWh of the individual input phases, as well as the current per group with the 32A variants. The individual outputs can be switched on and off remotely depending on the type. Limit values, alarms and status can be retrieved and set. The housing consists of a robust sheet steel enclosure, so that the PDU can be easily installed in a Knürr rack, or even into other enclosure systems. The Liebert MPH can be installed vertically or horizontally (19"), depending on the type. The PDU is delivered pre-installed with the same communication card (RPC-1000) as the Liebert MPX®. All Liebert MPX® external modules can therefore be connected (e.g. sensors, display module). Up to 4 MPX/MPH can be connected as rack PDU array to consolidate the user's IP connection and the device monitoring.

Liebert MPH™ Strong points

■ Liebert MPH™

Control technology support

The monitored electrical parameters include: effective power, current intensity, voltage and accumulated energy or consumption. Capacity-oriented current intensity threshold values enable detailed rack PDU alarm signals.

■ Liebert MPH™:

- The benefit for your data center: Monitors electrical and environment parameters with threshold values and alarm management
- Controls access to the socket power
- Controls and administers individual sockets and/or groups of consumers and devices

- Forecasts failure situations before they occur and actively administers connected devices for maximum operating time

■ Liebert MPH™ benefits: Flexibility

- A local display can be easily mounted and adjusted to heavily equipped and changing rack environments
- Mounting in 19" and 42 U rack environments
- Form factor: vertical (0 U) and rack mounting
- Compatible monitoring platform for Liebert MPH™ and Liebert MPX™ with seamless simultaneous operation
- Individually positioned interface for input network cable

Higher availability

- Controls and administers individual sockets
- Forecasts overcurrent conditions before critical phase
- Switches off redundant devices with power failures to increase availability and backup power
- Extended overload protection in branch lines minimizes danger with cascaded PDU overload

Extremely low operating costs

- Comprehensive control technology in a cost-effective package
- The rack PDU array uses a shared IP address for up to four racks of PDUs, making installation quicker and easier
- Energy and current measurement provides data for maximizing the data center's current and cooling infrastructure
- Energy efficient control technology for sockets

DOS20153

Liebert MPH™ Rack PDU

- The **Liebert MPH® Type M** is a monitored power distribution unit that monitors the phase inputs.
- Measured per phase are: power, current, voltage and consumption. The current is also monitored per group (only 32A model).
- The **Liebert MPH® Type C** can also switch the individual outputs on and off remotely.
- Integrated Liebert RPC-1000 communication card enables remote monitoring and maintenance of MPH units.
- The RPC-1000 enables the interconnection of several MPH or MPX units and connection of the Liebert MPH® with the Liebert MPX® units for monitoring and administration.
- The Liebert MPH® can be monitored directly on-site with the RPC BDM-1000, an optional display module that is connected directly with the communication card. The monitoring unit can be flexibly mounted on the rack.

Knürr DI-STRIP®
Basic Rack PDU

Basic Rack PDU

Knürr DI-STRIP®

Knürr's **Basic Rack PDUs** are the solution for every data center looking for robust, economical and flexible rack concepts.

The Knürr **DI-STRIP®** product family meets the power distribution requirements of many IT applications and other areas. Specially configured for the growing number of electronic components in network switching racks or server racks. Available with the most diverse accessories, such as circuit breakers, overvoltage protection, mains filter, master-slave function, emergency off button, fault current circuit breaker, local and remote power measurement, for example.

Knürr DI-STRIP® M:

The DI-STRIP M model monitors the input current per phase locally. An unbalanced load warning is also shown on the display with 3ph PDUs. The displays can be changed in 90° steps with a selector switch.

Knürr DI-STRIP® RM:

The DI-STRIP RM model monitors the input current per phase locally and remote. Unbalanced load warning and different threshold values can be set and remotely forwarded.

Knürr DI-STRIP® Strong points

- 1 **Robust!**
Protects the plug panel with high casing edges.
- 2 **Stability**
High stability and torsional strength provided with closed sheet steel casing.
- 3 **Electrical safety**
Full power to all connected consumers with full-length brass busbar.
Shock hazard-proof and low contact resistance with double spring contacts.
- 4 **19" installation**
Optimum use of space with 19" installation:
- With low height – 1 U (44.45 mm)
- With 45° positioning of the sockets
- 5 **International compatibility**
Numerous standard products in accordance with international standards. Special models on request.
- 6 **Flexibility**
Plenty of room for movement with 2.5 m power supply cable.
Flexibility provided by standard plug with dual earthing system.
- 7 **Aesthetics**
Appealing design with extruded casing and design side panels in visible area.
- 8 **Cost-effective**
Quick and easy mounting on the rack extrusion.
- 9 **Universal**
1 and 3-phase systems.
- 10 **Modularity**
Socket strip modules can be easily combined using plug-in connections.
- 10 **Plug-in**
Proven GST18 plug-in system for connecting socket strip modules.
- 11 **Certifications**
Global approvals and certifications are a quality feature.

Knürr DI-STRIP® RM

- Real RMS value display for the alternating current per phase
- LCD display rotation in 90° steps
- Display bright/dark switchover
- Warning display for unbalanced load
- Load changes signaling
- Automatic background light reduction

Data interface:

- The plug strip can be integrated into the network via an RJ45 plug.
- Access is possible without special software via a remote browser.
- Three variable limit values and a warning for unbalanced loads can be specified.
- The module enables access for up to 5 users or administrators; access is password-protected.
- The software displays the name and place of the PDU; this information can be entered by an administrator.
- The user can specify a static IP address or access using DHCP.
- Firmware updates can be made via a web browser.
- Supported protocols: HTTP, SNMP (Traps, SET, GET), Syslog

Knürr DI-STRIP®

HighPower®

The **Knürr DI-STRIP® HighPower** is a solution for every data center with high power requirements and low space in the rack. The special shape enables space-saving installation in the rack. This means free access to the servers, even with 600 mm wide racks. Maintenance of the servers (e.g. power supply changes) is possible at no further expense.

The Knürr DI-STRIP® product family meets the power distribution requirements of many IT applications and other areas. Specially configured for the growing number of electronic components in network switching racks of server racks. The **DI-STRIP® HighPower** is available with and without remote power measurement (DI-STRIP® HighPower RM).

Knürr DI-STRIP® HighPower Strong points

Flexibility

With or without remote power measurement. Easy expansion in the rack with tool-less installation. 3 m power cable for more spatial flexibility.

RM model

Current values can be read via a big transparent LCD display. Rotating display in 90° steps; the display can always be read the same regardless of the installation direction.

The power measurement module can be integrated into different management programs via different protocols (SNMP, http, Syslog).

High availability

Meets the strictest EMC requirements with radiation and irradiation interference. Robust and stable with a closed sheet steel housing. Reliable, robust solution.

Extensive certification in acc. with international standard.

RM model:

Different threshold values can be flexibly specified; power values can therefore be monitored and load drops can be signaled.

With 3-phase PDUs the unbalanced load can be monitored, which means the neutral conductor is protected from overloads.

Low operating costs

Especially flat housing extrusion, providing full accessibility to the 19" level with 600 mm wide server racks. Server power supply changes are very quick and easy.

Quick and easy installation on the rack requires minimum space and shorter installation time.

RM model:

Automatic background light reduction extends the display's service life and reduces power loss.

DOS20153

Knürr DI-STRIP® HighPower

- Flat design provides access to the 19" level, even with 600 mm wide racks
- individual backup for outputs (groups with 10 A)
- Outputs divided into groups with max. 20 A per group
- Modular expansion in the rack with tool-less PDU installation

Additional function for HighPower RM type (remote metered)

- With big transparent LCD display
- Effective value display of alternating current
- LCD display rotation in 90° steps
- Display can be switched bright or dark
- Load changes signaling - Automatic background light reduction
- See DI-STRIP RM for technical description for data interface

Three Phase Knürr DI-STRIP®

TriplePower®

The **TriplePower**® name represents the performance of our latest development. The **DI-STRIP**® **TriplePower**® supplies network racks with three times the normal power. This requirement is generated by the increasingly higher packing densities and constantly rising energy requirements in racks, which are often caused by aptly named “Blade Servers” or 1 U “Pizza Servers”, more than 40 of which can be integrated into a Knürr Miracel rack.

The **DI-STRIP**® **TriplePower**® uses a classic 3-phase feed with 3x16A, which it optimally distributes throughout the whole rack. The 23 U and 41 U standard lengths cover the entire rack height range of the Knürr Smaract² and Miracel rack families.

In the maximum configuration level, up to 48 users can be connected to a **DI-STRIP**® **TriplePower**® (Euro socket strip). With redundant feed, 96A can consequently be provided in a 19” rack with only two **DI-STRIP**® **TriplePower**®.

Three Phase Knürr DI-STRIP®

BladePower® PizzaPower®

A new generation of the power distribution units of the DI-STRIP® range now ensures even more power: **BladePower®** and **PizzaPower®** for fail-safe power supply distribution in network racks.

Increasingly higher packing densities and therefore constantly increasing energy requirements in server racks caused by blade servers or 1 U pizza servers will now be handled electrically.

Up to 35 kW dissipated heat can be removed from modern CoolTherm® server racks. But how is the necessary power supplied into the rack, which can cause such power losses? The PDUs (3x32 A) optimally distribute the required power over the entire rack, with connection of up to 21 consumers possible in the highest configuration level. 192 A can be supplied to the rack with redundant feed.

Knürr DI-STRIP® Protector FI / LS Standard DIN 49 440

Protector FI / LS

- Fault current switch and circuit breaker
- Provides a combination of user, overload and short circuit protection
- Residual operating current $I_g = 30$ mA for alternating and pulsating direct fault current
- Circuit breaker: 16 A
- Tripping characteristic, type B, 2-pole
- 19" installation option (with length 483 mm)
- Socket rotation: 45°
- Cable: H05VV-F 3G 1.5 mm²
- Molded right angle plug

Material/ Finish

Housing: closed sheet steel extrusion, zinc-passivated, powder-coated texture
Plastic parts: Vampamid 6 0024 VO (UL94), recyclable
Internal conductor: full-length busbar, brass

Dimensions

Socket spacing: 24 mm 50 mm
Height: 78 mm
Housing width: 44.4 mm (= 1 U)

DOS00266

Knürr DI-STRIP® Power Cleaner Standard DIN 49 440

- High-frequency glitches are generally caused by switching processes in an operation from 100 kHz to 5MHz. This high-frequency rate overloads the mains frequency and affects adjacent electronic equipment. The mains filter attenuates this high-frequency rate.
- The attenuation behavior is harmonized with the typical interference spectrum.
- The mains filter works in both directions. This means that glitches from the equipment to the socket strip are also filtered from the mains.
- 19" installation option (with length 483 mm)
- Socket rotation: 45°
- Cable: H05VV-F 3G 1.5 mm²
- Molded right angle plug

Material/ Finish

Housing: closed sheet steel extrusion, zinc-passivated, powder-coated texture

Emerson Network Power Rack PDUs

1 DOS20147

3-phase in rack with GST18 Strong points

2 DOS20132

3 DOS20142

3 DOS20135

1 Requirement

Constantly increasing energy requirements in the rack caused by high packing densities (e.g. 1 U Pizza Servers, Blade Servers, etc.)

2 Solution

3-phase distributor with GST18 plug system, e.g. 96 A and more with redundant feed

3 Benefits

- Modularity
- Plug-in capability (no wiring required)
- Expandability
- Cascadability
- Easy provision of redundancies / UPS secured circuits
- Combination of DIN Schuko and IEC320, for example
- Installation position freely selectable
- Good alternative for 3-phase DI-STRIP Triple Power (see page 156)

DOS20104

Power Supply Cable, 3-Phase Accessories for GST 18 plug system

- GST 18 socket for connecting GST18i5 distributor block with 3 phases

DOS20029 With emergency Off switch and FI/LS circuit breaker

Knürr DI-STRIP® Protector Emergency Stop FI / LS Standard CEE 7-V (UTE) / France

- With 2-pole emergency stop switch for user protection
- For protecting operating personnel
- For manual emergency switching off of the connected consumers
- Phase and neutral conductors are safely separated
- Switch must be specifically unlocked to restart
- Socket rotation: 45°
- Cable: H05VV-F 3G 1.5 mm²
- Molded right angle plug

Material/ Finish

Housing: closed sheet steel extrusion, zinc-passivated, powder-coated texture
Plastic parts: Vampamid 6 0024 VO (UL94), recyclable
Internal conductor: full-length busbar, brass

Dimensions

Socket spacing: 24 mm Compact: 50 mm
Height: 101 mm
Housing width: 44.4 mm (= 1 U)
Cable 2.5 m

DOS20030 With mains filter

Knürr DI-STRIP® Power Cleaner Standard CEE 7-V (UTE) / France

- High-frequency glitches are generally caused by switching processes in an operation from 100 kHz to 5MHz. This high-frequency rate overloads the mains frequency and affects adjacent electronic equipment. The mains filter attenuates this high-frequency rate.
- The attenuation behavior is harmonized with the typical interference spectrum.
- The mains filter works in both directions. This means that glitches from the equipment to the socket strip are also filtered from the mains.
- 19" installation option (with length 483 mm)
- Socket rotation: 45°
- Cable: H05VV-F 3G 1.5 mm²
- Molded right angle plug

Material/ Finish

Housing: closed sheet steel extrusion, zinc-passivated, powder-coated texture
Plastic parts: Vampamid 6 0024 VO (UL94), recyclable
Internal conductor: full-length busbar, brass

Dimensions

Socket spacing: 24 mm 50 mm
Height: 45.5 mm
Housing width: 44.4 mm (= 1 U)

Approvals/certificates

Knürr PowerTrans®

Power Distribution Rack

Central connection unit for
power supplies for individual
server racks.

Power Distribution Rack

PowerTrans®

The **Knürr PowerTrans®** Rack is the interface between the low voltage feed and the Power Distribution Unit (PDU) of the **Knürr DI-STRIP®** family, as well as other Emerson Network Power PDUs for supplying servers and further IT devices.

The power distribution is performed in the individual plug-in units and therefore no longer has to be installed fixed in the building. Up to 8 plug-in units can be integrated. Each plug-in unit is supplied with an A and B feed (redundancy). With max. 250 A/phase loads of up to 329 kVA can be supplied from just one single rack.

1 MIR20388

Knürr PowerTrans® Strong points

1 Equipping and installation

The outputs on the plug-in units can be flexibly configured according to customer requirements via various plug connections, type CEE and GST 18. (e.g. BladePower® or PizzaPower®, DI-STRIP® TriplePower®, and flexible distribution with the GST18i5 distributor block, 3-phase).

2 Two 3-phase feeds

- Feed A and feed B both three-phase with max. 250A/phase L1, L2, L3, N, PE
- Ideal for providing feed redundancies

3 Cable routing

Convenient cable routing from above and below.

4 Costs-conscious

Only the main feed on the rack must be installed by an electrician. The individual plug-in units and the PDUs can be connected per Plug & Play installation, thereby allowing later extensions to be performed cost-effectively.

2 MIR20390

3 MIR20391

4 MIR20386

MIR20377

Knürr PowerTrans® 19" Power Distribution Rack

- Feed of 2 separate 3-phase 400V mains, L1, L2, L3, N, PE
- Each with a 250A circuit breaker in the input
- Distribution to the individual plugs via busbars and contact-safe plug-in connections
- Up to 8 slot-in units with A feed and B feed are possible

Material / Finish

- Basic rack, extruded aluminum, polished
- Corner piece, die-cast aluminum, polished
- Glass infill front door, single safety glass panel, 4mm
- Covers, zinc-passivated sheet steel, powder-coated texture

Color

RAL 7021 dark gray

Supply schedule

- 1 rack with covers and front door
- 1 plinth for cable entry on the side and rear with leveling feet (0-25mm)
- 2 plinth trims for front and rear, with vent slots and fixing for filter mat
- 2 plinth trims, closed
- 1 set of busbars, safe from contact for A feed and B feed
- 2 circuit breakers with max. 250 A
- 16 power supply plugs for the slot-in units wired on the busbars
- 5 multifunctional braces with jumper bracket
- 2 19" T-slot extrusions
- 16 chassis rails
- 1 complete earthing set
- 1 complete locking set

MIR20383

Knürr PowerTrans® 19" Chassis

- 19" slot-in housing
- Width 19"
- Height 3 U
- Depth 480 mm
- Color: RAL 7021 dark gray
- 2 separate 3-phase inputs with max. 63A phase current
- Outputs acc. to variants 1-4

Variant 1 Plug-in

- 2 protected 3-phase outputs, 230V/400V 32A via IEC60309 socket, 3Ph/N/PE 6h, red
- Suitable for connecting 2 PizzaPower 3-phase (03.631.021.1) or 2 BladePower 3-phase (03.630.015.1)

Variant 2 Plug-in

- 4 protected 1-phase outputs, 230V 32A via IEC60309 socket, 1Ph/N/PE 6h, blue
- Suitable for connecting 4 PizzaPower 1-phase (03.631.007.1) or 4 BladePower 1-phase (03.630.005.1)

Variant 3 Plug-in

- 6 protected 1-phase outputs 230V/400V 16A via GST18i5 Euro installed socket, 3Ph
- Suitable for connecting GST18i5 distributor block, 3-phase (04.000.038.9, for flexible distribution to 1-phase socket strips) as well as connecting a TriplePower 3-phase (03.600.024.1 or 03.600.048.1)

Variant 4 Plug-in

- Empty housing
- For customer-specific equipping

UPS

The right technical solution for every requirement.

UPS20082

Uninterruptible Power Supplies Strong points

- **Safety:**
High-grade online and line interactive technology guarantees safe and uninterruptible operation of your systems.
- **Modularity:**
The individual components of this range can be combined according to requirements and consequently produce specifically defined solutions.
- **Efficiency:**
The 19" modules provide high performance on minimum installation space with compact construction and modular setup.
- **User-friendliness**
Comprehensive displays and interactive interfaces for external analysis of status messages provide the user with current system information at all times.
- **Investment security:**
Our solutions grow with your requirements, can be flexibly used and are easily expanded.
- **Highest possible protection**
Online UPS systems provide the highest possible protection against the 10 most frequent mains disturbances.
- **Central UPS systems**
Higher power classes, 10 kVA to 4800 kVA, with installation and maintenance on request.

Line-InterActive / PowerSure PSI XR IEC 62040-3 VI-SS-313

UPS20085

The line interactive UPS model uses an inverter in inverse operation to recharge the battery with stable mains supply. If the mains power supply fails, then the working direction changes and the battery powers the inverter. Because the transducer constantly monitors the mains input, it can react quicker to failures and correct voltage breaks. The transducer connected upstream from the consumer has a specific filtering effect against mains disturbances. This technology is highly recommendable for uninterruptible power supplies for many applications, particularly with regard to PC requirements.

Liebert® PSI-XR High-performance rack & tower UPS system for network protection

The **Liebert PSI-XR** is a compact UPS system with line-interactive technology, which was specially designed for IT applications, such as network racks and small data centers, for example.

The Liebert PSI-XR's flexible design allows the unit to be configured as a standalone tower and rack installation over 2 U.

The Liebert PSI-XR is available as both 230-V and 120-V model in four different power classes.

The UPS is especially impressive with its innovative line-interactive design and automatic voltage regulation. This protects against voltage fluctuations by increasing or reducing the power supply to the level required by the connected devices. The UPS system also ensures longer battery service life, as the devices are supplied for as long as possible via the mains.

■ Liebert PSI-XR standard equipment Flexibility:

- Six or seven battery backed-up outputs
- Configurable input voltage range
- Free swivel display panel
- Automatic frequency scanning
- Several communication options (serial, USB, SNMP and contact closure)

■ Higher availability

- Data cable overvoltage protection
- UPS system status early warning system
- Fully automatic battery test
- Lightning and overvoltage protection
- Remote emergency stop
- Hot-swappable batteries the user can change
- Sufficient battery run time under full charge with power failures for proper shut down of the connected equipment

■ Lowest possible TCO (Total Cost of Ownership)

- 0.9 power factor for more power for the protected devices and energy-efficient operation
- Wide input voltage range
- Reduced installation input (costs and time)
- Standard two year warranty

■ Ideal for:

- PCs
- Networked workstations
- Servers
- Network racks
- Big network peripherals
- VoIP

USV20086

On-line UPS systems have the advantage of effectively filtering out spikes and drop outs by converting alternating voltage into direct voltage and back into alternating voltage.

Our online UPS systems are series equipped with interfaces, so that unattended computers can be specifically powered down automatically and powered up again after the mains supply has returned.

If faults occur in the system itself due to battery aging processes, an automatic by-pass switch ensures bridging and direct connection to the mains without interruption.

The user is acoustically and optically informed about defective functions and power failures.

The accumulator takes over from the rectifier without any interruption when there is a mains failure and provides the necessary energy for a certain length of time. On-line systems provide high levels of security and are particularly recommended for high-grade and sensitive consumers.

Liebert® GXT3, 700VA - 3000VA Model Reliable online UPS protection in compact 2 U package

The **Liebert GXT3** is a true online UPS, which continuously supplies the IT equipment with quality alternating current. No interruption with changeover to batteries. They protect devices from almost all power supply faults – be they caused by power failures, voltage spikes, voltage drops or whatever other faults. The UPS is available as rack and tower version.

One of the most economical and reliable UPS systems in its class: the Liebert GXT2 is the industry leader in terms of dimensions, performance and reliability.

The 0.9 power factor ensures more power for protected devices and more energy-efficient operation.

The optionally available MicroPOD Output Distribution And Maintenance Bypass Module guarantees operation – even during planned UPS maintenance work.

■ Flexibility:

- Up to six battery backed-up outputs
- Free swivel display panel
- Automatic frequency scanning
- Installation flexibility:
- Several communication options (SNMP/WEB & USB)
- Compatible with Liebert MultiLink, Liebert Nform, Liebert Multiport and the Liebert Intellislot Relay Interface card

■ Higher availability

- Advance early warning of UPS system status
- 4-8 minutes of battery backup time at full load
- Scalable runtime
- Full sequenced battery testing
- User replaceable hot swappable batteries

■ Lowest possible TCO (Total Cost of Ownership)

- Power factor 0,9
- Wide input voltage range
- Intelligent fan operation
- Efficient operation
- Warranty

■ Ideal for:

- PCs
- Networked workstations
- Servers
- Network racks

The Liebert GXT3 can be configured for rack or tower installation. The LED display swivels and can be easily read in all positions.

The Liebert GXT3 has internal batteries and can also supply up to four external battery racks (2 U).

Emerson Network Power UPS

Liebert GTX2 6000 VA - 10000 VA

True-Online-Power – Full energy for your company

This is an individually configurable high-performance UPS with proven reliability, equipped with internal hot-swap batteries and extendable back-up time in the compact rack and tower design.

The functions and flexibility of the **GXT2** make this UPS the optimum solution for your server or data centers, and for networks and telecom systems that require a reliable, uninterrupted supply with quality power.

As a true online (continuous transducer) UPS, in addition to power factor correction, frequency conversion and unlimited extension options for external batteries, the **GXT2** also provides automatic and manual internal bypass functions, as well as an optional external maintenance bypass. The Liebert **GXT2** has all the functions required to protect company-critical equipment against all power supply problems.

USV20097

Areas of application

- LAN and WAN servers
- Cluster network components: hubs, routers, bridges
- Remote telecommunication units
- Internal telecommunication systems
- Voicemail and e-mail servers
- Test and diagnostics systems
- Engineering network servers
- Protection of industrial, microprocessor-controlled equipment
- Company-critical equipment

Most important benefits

- Online VFI technology with sine wave output
- Extendable battery options for long back-up times
- Communication via USB, serial ports and networks
- Input with power factor correction
- Highly-sensitive early warning-shut down via MultiLink software
- At least five minutes battery-supported operation
- Settings, voltage and frequency according to individual configuration
- Hot-swappable - user can change batteries
- Cold start via battery
- UPS remote monitoring via SNMP/Web card
- Optional bypass rack for easy maintenance

True-Online-Power – Full energy for your company

Emerson Network Power UPS

GXT2 rack model (version show: 5U, 4500-6000VA)

Most important benefits

There is no switchover time with a continuous transducer UPS.

If the mains power fails, the critical load is fed seamlessly by the GXT2.

For optimum usage the GXT2 can be adapted to your requirements with a specially developed software package. The GXT2 is available in the power classes 700, 1000, 4500 and 6000 VA. Batteries that the user can swap out ensure low maintenance operation. And you will find all of this in one of the most economical UPS systems in this class.

Quality power

The Liebert GXT2 is a “True Online” power source. Whatever the quality of the inbound mains power, the clean sine wave output meets the highest requirements of your equipment. In contrast to other UPS technologies, the GXT2 is equipped to overcome all potential power supply problems.

- Spikes and transient overvoltages
- EMI and RFI faults
- Voltage drops and undervoltages
- Harmonic waves
- Power factor corrected loads
- Power failures

Integrated reliability

The GXT2 is configured in all areas for maximum reliability. It consequently has functions that you will search in vain to find with other systems in the same price class:

- Power factor corrected loads:
The GXT2 maintains stable output voltage, even with power factor-corrected consumers, which are so typical for modern IT environments.
- Frequency conversion:
For 60Hz input/50Hz output or 50Hz input/ 60Hz output without any power losses.
- Unlimited connection options for external batteries:
Any amount of 2U/4U battery racks can be connected to achieve additional back-up times.
- Internal automatic and manual bypass:
Guarantees uninterrupted switchover of the power supply for maintenance purposes.
- Optional maintenance bypass and output:
Power distributor: Enables problem-free installations and safe routine maintenance on the UPS or connected devices.

Communication for power supply monitoring and control

The GXT2 provides an extensive range of communication options that correspond with the control and monitoring requirements of modern network and server systems.

Intellislot® SNMP/Web Card

For extended UPS communication and control the Intellislot SNMP/Web Card provides your GXT2 with extensive SNMP and web management. You consequently achieve a high degree of flexibility, as you can monitor and control your UPS within the network. This adapter can also be easily configured for a standard SNMP implementation, and can be easily and efficiently shut down using MultiLink shutdown software from Liebert without any personal monitoring.

The SNMP/Web card monitors a wide range of UPS information so that the user can monitor and control the GXT2 via the network with a standard web browser and SNMP connection

Intellislot USB Adapter (USB CARD)

This card, which can be used during running operation, provides a USB interface for Microsoft Windows 2000 and XP Power Management, and consequently enables the problem-free and orderly shutdown of the connected consumers, without having to install additional software. An approx. 2 meter cable is included in the supply schedule.

Intellislot Multiport Kit (Multiport4)

The Multiport4 Card can also be used during running operation, and splits the UPS contact signals into 4 separate contact closure sets, which enable the communication with the MultiLink shutdown software on four servers simultaneously.

MultiLink™ Shutdown Software

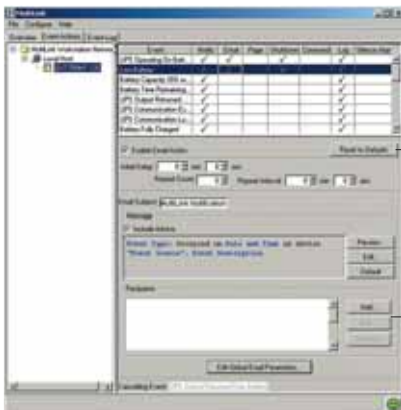

The GXT2 UPS system can be used in combination with the Liebert MultiLink Shutdown software for the orderly shutdown of your IT system. This package switches off all standard operating systems smoothly and controlled when the UPS batteries require charging.

The MultiLink automated shutdown software has the critical task here of protecting all information for an IT system or a network. It is available in two versions: for individual applications and for several systems within a network, even with multiple used operating systems. During power failures that last for longer periods, MultiLink automatically shuts down the computer operating systems smoothly and controlled when the UPS batteries have run low by a defined point. MultiLink is configured to inform the users automatically. Alarm signals can be sent to alpha-numerical pagers or can appear directly as pop-up messages on the user's monitor. MultiLink can be configured for both inband and out-of-band operation. Sending alarm and status signals via a network can significantly reduce the costs of cabling and installation.

As an alternative to this it is possible to lay communication cables between the individual computer systems in case a network cabling is too problematic or expensive.

Intellislot Interface Kit for Relay Contacts (Relaycard-Int)

This kit provides 4 voltage-free relay contact signals for the states: "Battery operation", "Low battery charge", "Bypass operation" and "General alarm signal". This card can be installed during running operation via a DB25F port.

Automatic system and graphic messages can be configured for each UPS event.

The configuration details appear in the lower window section when event and message type are selected.

Emerson Network Power UPS

Technical Data [Liebert GXT2 tower/rack version]

Systems for quality power

GXT2 10000R230

For applications with extreme heat density

Benefits

- Online VFI technology with sine wave output
- Parallel configuration for power increase or providing redundancy
- Extendable battery options for long back-up times
- Communication via USB, serial ports and networks
- Input with power factor correction
- Highly-sensitive early warning-shut down via MultiLink software
- Settings, voltage and frequency according to individual configuration
- Hot-swappable - user can change batteries
- Cold start via battery
- UPS remote monitoring via SNMP/Web card
- Compact design in 3 U + 3 U format
- Available as configuration of 1, 2, or 3 units to provide full power or as 1+1, 2+1 or 1+2 redundancy

Applications

- Blade Server
- Pizza Box Server (1 U)
- LAN and WAN network server
- Cluster network components: hubs, routers, bridges
- Voice over IP (VoIP) switch and router
- Internal telecommunication systems
- Voicemail and e-mail servers
- Test and diagnostics systems
- Protection of industrial, microprocessor-controlled equipment
- Company-critical equipment

Liebert GXT2 10000R230

Uninterruptible power supply in compact design for environments with extremely high heat densities

With its compact format (6 U) and special features, which are among the best in their class, the new Liebert **GXT2** 10kVA from Emerson Network Power is the ideal solution for reliably supplying blade servers, pizza box servers, Voice over IP equipment and other data center and network systems in standard 19-inch racks with power.

Its redundant configuration option makes the Liebert **GXT2** 10kVA a modular and scalable solution that adjusts perfectly to your requirements. Utilize the 1+1 or 2+1 configuration with up to 20kVA to produce clean power for your applications and an additional 10kVA as reserve, or operate three modules parallel for loads of up to 30kVA.

This is an individually configurable high-performance UPS with proven reliability, equipped with internal hot-swap batteries and extendable back-up time in the compact rack and tower design. The Liebert **GXT2** 10kVA Rack Version is part of the Emerson Network Power Adaptive system solution for precision thermal management and uninterruptible power supply and was developed for the Liebert X-treme solutions.

Knürr RMS Compact II®

Knürr RMS Compact II®

Knürr RMS Compact II®

Damage prevention with checks and controls

System and network management requirements mean the systems' ambient conditions must be monitored. Reliability and system availability are indispensable. Compliance with the required ambient parameters is extremely important for the fault-free operation of high-grade components.

Inadmissible fluctuations in temperature or humidity often cause hardware defects. Constant automatic monitoring of these parameters is therefore a basic requirement for ensuring properly functioning operability. With the rack monitoring systems offered by Knürr, this information can be

recorded and forwarded directly to a higher-level management system, e.g. Nagios light form.

This recording is not, however, sufficient to ward off damages. For short response times when faults occur, it is helpful if the monitoring system can perform actions automatically (e.g. activate additional fans).

When defined incidents occur, the Knürr RMS Compact II® can immediately send a message as an 'SNMP trap' to the management system or directly as an e-mail to a technician or an SMS gateway.

Rapid fault-finding and removal is extremely valuable! The ability to connect additional sensors to monitoring systems not only allows racks to be monitored – so too can complete rooms or building sections. All important environmental parameters of a system can consequently be recorded and evaluated in a simple and straightforward way.

The advantages of Knürr's modern rack monitoring system:

- Guarantees fault-free operation
- Detects disturbances early
- Logs incidents
- Makes service assignments easier with automatic monitoring
- Activates countermeasures in the event of a fault
- Central control of consumables (filters, paper, toner, meter readings, inspection intervals, etc.)
- Connection of up to 12 sensors in any arrangement

RMS20013

RMS20015

Knürr RMS Compact II®

Description

- Compact construction - Zero unit solution (for mounting outside the 19" installation area)
- 19" installation with adapter bracket
- Safe clamping of all connected cables with integrated cable clamping bracket
- Cost-effective orderly installation with Plug & Play concept
- Convenient cabling with RJ45 sensor
- TCP/IP connection via Ethernet (10/100 Base T)
- Configuration via SNMP and web browser
- Web access is password-protected and optionally encrypted (https)
- 3 different user levels
- Freely programmable filter system (boolean logic) for implementing all alarm conditions
- Compatible with standard network management systems – HPOpenView, Cabletron Spectrum, Castlerock, IBM Netview, IBM Tivoli, MG-Soft, Compaq Insight Manager, SUN NetManager, etc.
- Sensors for monitoring all current environmental influences (optional)
- Internal power supply for sensor equipment (no additional power supply necessary)
- Alarms via LEDs, relay, network management or e-mail (SMTP)
- Syslog support for continuous external data storage
- System time balancing with NTP servers

Technical data

- 12 universally usable sensor inputs for temperature sensors, humidity sensors, digital (on/off) or analog sensors (0...10V)
- 3 digital outputs (2 x relay, max. 3A at 230VAC, 1x 750mA at 48VDC)
- Power supply: 100 – 240 VAC
- Operating voltage: 12VDC

Approvals

- CE Symbol in acc. with Low Voltage Directive 73/23/EEC, EMC directive 89/336/EEC

Color

- RAL 7021 dark gray

Supply schedule

- 1 Knürr RMS Compact II
- 1 power supply
- 2 19" mounting brackets
- 1 power supply mounting bracket
- 1 CD ROM (with manual, MIB file)

How supplied

Liebert Nform™

Liebert Nform™

Monitoring Software

Liebert Nform™

Increased reliability and energy efficiency with Emerson Network Power Monitoring solutions

Data centers are becoming more and more important in modern companies and today's society. The requirements for increasingly better IT infrastructures rise rapidly as a result. Demands are made here for the highest possible performance with very high efficiency at the same time. These requirements

appear difficult to meet because alone the server cooling in many data centers uses up as much energy as the operation itself.

An integrated monitoring is needed to increase profitability while also reducing costs, especially with increasing complexity.

Liebert Nform™ helps to meet these requirements:

What is Liebert Nform™?

- Liebert Nform™ is a DC monitoring software especially for Liebert infrastructure systems with trend analysis function, alarm management and results notification.

What can Nform™ do?

- Liebert Nform™ provides uniform monitoring interface and therefore an overview of the operative

status of a large number of devices, such as:

- PDUs: Liebert MPX®, Liebert MPH®, Knürr DI-STRIP® RM
- Uninterruptible Power Supplies
- Water-cooled racks, such as:
 - Knürr CoolLoop®, Knürr CoolTherm®
- Thermal equipment
- Environmental monitoring systems, such as
 - Knürr RMS Compact II®

What are the customer benefits?

- Liebert Nform™ is an easy to install and use management suite that does not require complicated adjustments.
- The integration of all infrastructure components, from PDUs to RMS compact II right through to water-cooled server racks is very easy, despite the high number of monitoring data points.
- Liebert Nform™ supports a whole range of state-of-the-art features:
 - Dashboard: The system has a configurable start page on which various graphics transparently illustrate the status.
 - Separable window content for transparent presentation on several monitors
 - Trending enables the storage and graphic presentation of historical data
 - Optional automatic device actions if an error occurs; application execution, setting device parameters (e.g. cooling), shutting down servers and much more.
 - Internationalization enables installation in various languages

MIR20109

Knürr @Lock® Strong points

- The very small and modular design means that no additional space or greater installation depths are required in the rack.
- Contacts for emergency power supply that can be activated externally using trade standard batteries are integrated into each swing handle.
- An integrated light-emitting diode signals with different colors to inform whether or not the current access is authorized.
- Each device of the series can be networked with the other devices, which results in numerous possible combinations and options.
- Every opening process can be logged in the network. Existing network structures can be used for networking.

MIR20284

Knürr @ Lock® Swing Handle Security for racks in the data and networking area

- Conventional keys are replaced by electro-mechanical locking components.
 - A servomotor pulls the retainingawl back and releases the handle.
 - Actively opening the door is, however, made with the hand as before.
 - Easy exchange of the swing handle with later installation using unchanged installation opening.
 - Intended for standardized installation openings of conventional swing handle.
 - Can be quickly and easily upgraded to locking system.
 - Convenient administration of access authorizations.
- **@Lock Swing Handle, HID/IP**
 - The swing handle opens after a registered transponder card has been read.
 - With the HID variant, the communication between swing handle and PC runs via a junction box and a server.
 - The IP swing handle, by contrast, is configured via an IP address and is connected directly via the network to the PC.
 - Up to 2,048 HID cards per swing handle can be configured using a registered master card.
 - Configuration of the cards via the network is also possible with the included software.
- **Technical data**
@Lock Swing Handle, HID (optional IP remote connection)
 - 100...240VAC, power supply not included in the supply schedule
 - Operation with 12VDC/40mA (max. 430mA)
 - Multi-color status – LED
 - Real-time clock
 - Network communication is made via external server (gateway)
 - Up to 250 handles can be administered per server (IP address)
- **@Lock Swing Handle, HID/IP**
 - 100...240VAC, power supply not included in the supply schedule
 - Operation with 12VDC/40mA (max. 430mA)
 - Multi-color status – LED
 - Real-time clock
 - Network communication with cabled connection via integrated Ethernet 10/100 Base T
- **Function**
 - Opens after reading a registered card
 - Memory for 32 time segments
 - Memory for 2,048 cards per handle
 - Integrated logbook for 500 events
 - Result-related communication
 - 125 kHz transponder with unique code (HID 26 bit system)
- **Supply schedule**
@Lock Swing Handle, HID
 - 1 swing handle, HID
 - 1 reader
 - 1 reader connection cable
 - 1 network node, CX2001
 - 1 network cable, CN2001
- **Supply schedule**
@Lock Swing Handle, IP
 - 1 swing handle, IP
 - 1 reader
 - 1 reader connection cable
 - 1 data CD

MIR20283

Knürr @Lock® Server

The @Lock Server is the interface between the HID swing handles connected via the RS485 cable and the network connected via X-Port. It is used for intermediary storage of results and tasks and can administer up to 250 users (swing handle).

The @Lock Server has an integrated real-time clock, which is buffered when power fails for up to 1 hour.

■ Technical data

- Power supply: via an external plug-in power supply, 12V (DC)
- Nominal current: 80mA (DC)
- Max. power consumption: 200mA (DC)

- Main board Interface: RS 485 - Cable (A, B, GND, +12V) max. length to the next gateway, 5m
- Network interface: X-Port, RJ34 plug, 8-pin
- Storage space for tasks: max. 10 x 250 tasks
- Storage space for events: max. 100 events
- Max. number swing handles: 250
- Integ. real-time clock: with buffering of up to 60min at 25°C

MIR20282

Knürr @Lock® Software "Administration Suite 2.0"

The @Lock software is the user interface for controlling and configuring the @Lock Swing Handle. Using this software, the administrator can create access codes and HID cards and assign users. The handle can be controlled in real-time from the software platform. All actions that are directly related with the swing handles are stored in an SQL database (e.g. opening, closing, granted accesses and accesses rejected on the basis of non-authorization).

■ Technical data

- MS-Windows 2000/NT etc.
- SQL database
- TCP/IP network connection to the swing handles
- The number of handles and gateways is only restricted by the capacity of the computer
- Communication with swing handle via server (gateways) or directly with @Lock Swing Handle, IP

■ Functions/applications

- Client-server-based administration program for the @Lock system
- Requires max. 3-4 seconds for a status update
- Administration of users and rights
- Administration of HID cards, opening of active keys and access codes, closing, activation or deactivation of swing handles
- Observation of authorized and unauthorized access attempts
- Recording of all events connected with swing handles
- Central observation of swing handle
- Combination of all swing handles and servers
- Events recording
- Optional web interface
- Supports Sarbanes/Oxley and HIPPA requirements

MIR20281

Knürr @Lock® Desktop Reader

The transponder cards are read into the administration software using the desktop reader. This enables the later configuration of the access media in the system (lock plan creation). The desktop reader is connected via the RS-232 interface with the PC on which the administration software is installed. The transponder card is inserted in the read-out unit for reading the transponder ID. The reading process can then be initiated in the administration software by hitting a key.

■ Technical data

- Power supply: 12V +/- 10% (DC max. 400mA) via low voltage socket
- Nominal current: 80mA (DC)
- RS232 interface: RS 232 cable (RXD, TXD, GND, Reader present, PC present), 38,400 Baud
- Connection cable: (reader – read-out unit) 8-pin, 250 cm, UL stranded wire, AWG 26

MIR20095

Combi Lock Security and flexibility realized mechanically

- This additional lock, the aptly named “Over-ride”, produces a combination swing handle with particularly special advantages.
- Innovative combination swing handle with two activation options
- Independent opening and closing of the swing handle via combination or cylinder lock
- Can be used for right and left closing doors

■ Installation

In the standard installation opening of the Miracel rack doors. Quick mounting with plug-in connections and screw fittings.

■ Technical data

- Cylinder lock
- Combination lock can be individually set with 3 digits
- Independent activation

■ Supply schedule

1 swing handle with combi lock
1 mounting material set
